

1,427 supplied records

1,037 participant IDs · 120 supplied text features

1,037 participant records retained

Earliest stored survey per ID; exclude 195 exact copies and 195 later records

Participant-level random split

Development sample

n = 933 participants · 90% allocation

Five-fold model selection

42 configurations; fold-local scaling
Select by normalized RMSE; lock models

Holdout sample

n = 104 participants · 10% allocation

Locked final evaluation

Pearson r, RMSE and 95% intervals
Paired comparisons and fixed sensitivities

Aggregate features support retrospective prediction; raw posts, word-level counts, odd/even features and questionnaire items were unavailable.
